USER JOURNEY REPORT

LEARN GREEN, EARN GREEN

PLATFORM SPECIFICATION · FOR THE DEVELOPMENT TEAM

VERSION 4.0 · JUNE 2025 · CONFIDENTIAL

// NAVIGATION

CONTENTS

Corrected against the live MTL build. Each section pairs the journey with a visual mockup. Brand portals each look entirely different in production; these mockups show the template structure underneath.

01	Template Model — One Engine, Infinite Skins	02	The Hub — Home Screen & Five Components
03	Landing Screen — Rotating Hero + Banners	04	The Section Grid + Brand Banner Cards
05	The Drop Sheet — Products, Reviews, Rotations	06	PK Decks — Flip-Through PDF Viewer
07	Store Assets — Download + Request Physical	08	Quizzes — Full-Screen Learning
09	Media Feed — Posts & Live Comments	10	AI Assistant + Booking-Only Video
11	Contact + Group Chat	12	Brand Admin — Setup, Content, Fulfilment
13	Analytics + the Education Award	14	Product Rules + Build Phases

KEY PRINCIPLE

Nothing leaves the platform. Every asset, deck, quiz, review, video, and message lives inside Sprout. Each portal is one page — an app shell that loads once, with every section opening as a layer inside it. The hero is a rotating carousel; brand banners flank it (top strip on mobile); an AI assistant sits bottom-right throughout.

COMPLIANCE FRAMING

The monthly incentive is the Education Award — an education fund for professional development, contributed by brands. Never a prize, reward, or cash, anywhere in the interface. This keeps it compliant with cannabis-industry rules on incentives to retail staff.

// READ THIS FIRST

ONE ENGINE. INFINITE SKINS.

Sprout is one platform running one template. Every brand portal has the same bones — sections, navigation, behaviours. What changes per brand is data: logo, colours, fonts, hero slides, banners, content, and which sections are on. Customisation is configuration, never a code change.

To a budtender inside the MTL portal, nothing looks like Sprout. The brand is the host. Sprout shows its identity in two places only: the Hub, and a "Powered by Sprout" footer credit.

- T

The template provides

The rotating hero, side/top banners, the section grid, Drop Sheet, PK deck flip-viewer, quizzes, media feed, chat, AI assistant, video booking, assets with physical-request, contact, notifications, analytics.
- B

The brand provides

Logo, colour set, font pairing, hero slides, banner cards, all content, and section on/off choices.

ONE PAGE. ONE APP SHELL.

Each portal is a single page. The PK deck flip-viewer, quizzes, and opened feed posts take over the full screen; everything else is a panel inside the page. Closing any layer restores the user exactly where they were. Build the shell first.

PLATFORM ARCHITECTURE

SAME BONES · DIFFERENT SKIN

// THE COMMUNITY LAYER

THE HUB — FIVE COMPONENTS

Where multi-brand budtenders land after login. Not a menu — the place where "Learn Green, Earn Green" becomes visible. Five components, in order of prominence.

- 1

Your Portals / Portals You Can Join

Member brands with notification badges (unread chat + new posts in one number), last-visited time, a live dot during sessions. Below: joinable brands with a Request Access button that queues for the Brand Admin.
- 2

Leaderboard

Top five platform-wide this month by composite learning score (quiz grades, decks, deck time, feed, sessions). Weighting hidden. The user's own rank always shows.
- 3

Award of the Month + Countdown

The Education Award, what it covers, a live countdown, the semi-anonymous leader, the user's gap to first.
- 4

Last Month's Winner

First name, store, score, brands they were active in, what the award covered. Stays up the full month.
- 5

Notification Settings

Per brand, per type: new posts, new assets, session reminders, new quizzes, team replies.

HUB — THE ONLY SPROUT-BRANDED SURFACE

// JOURNEY 5 — FIRST VIEW EACH SESSION

ROTATING HERO + BANNERS

The portal opens on a branded landing screen with three parts working together — before the budtender taps "Enter Portal."

1 The hero — a rotating carousel

A brand image carousel behind the logo, tagline, a short statement, and one "Enter Portal" button. Slides auto-advance, with left/right arrows and dot indicators. Each slide is a brand image (lifestyle, product, harvest). The rotation is core to the brand feel — not a static banner.

2 Brand banners — sides / top strip

Flanking the hero on desktop (collapsing to a top strip on mobile): the brand's banner cards. In MTL: New Batch, Live (red tag), Grow on the left; Video, Assets, Quiz on the right. Each has a category tag, headline, a line of text, and a link. Same cards as Journey 6.

3 AI assistant — persistent

A chat bubble fixed bottom-right with an unread badge, present here and throughout. See page 10.

FROM THE LIVE MTL BUILD

"BUDTENDER PORTAL · MONTREAL CULTIVATED" / "MTL CANNABIS" / "Committed to the Craft..." over a glowing bud image, six banner cards, the chat bubble bottom-right, and slide dots beneath the Enter Portal button.

LANDING SCREEN — DESKTOP

MOBILE

The two side columns collapse into one horizontally scrollable banner strip directly under the header; the hero and Enter Portal stack below; the AI bubble stays bottom-right.

// JOURNEYS 5-6

THE SECTION GRID

Tapping "Enter Portal" reveals the section grid — six numbered cards, each an icon, title, one-line description, and link. Tapping a card opens that section as a layer; the banners and AI assistant persist.

- 1

Store Assets

Brand assets, product cards, display templates, approved signage. Download + request physical. → Browse
- 2

PK Decks

Detailed product knowledge for every strain, as flip-through PDFs. → View Decks

THE DROP SHEET SITS BELOW THE GRID ↓

// CURRENT LINEUP

FULL PK →

THE DROP SHEET

BANNER CARDS (JOURNEY 6)

The side/top banner cards are brand-controlled notices — never platform advertising. Category tag (optionally colour-coded, e.g. red LIVE), headline, one line, a link into a section. Each has live/ expiry dates and is dismissible; impressions and click-throughs are tracked.

// JOURNEY 8 — THE PRODUCT HUB

THE DROP SHEET

The live product hub on the portal home — "// CURRENT LINEUP — THE DROP SHEET" with a "Full PK →" link. Where product info, reviews, and rotations all live. The single place to check what the brand has on the market right now.

- 1

Category cards

A row of cards with a green top border: Flower, Pre-Roll, Infused, Hash, Limited. Each lists current SKUs with key info (THC %, format, terps) and a "when available" note for limited items. This is the rotation view — update it and the lineup changes for budtenders instantly.
- 2

Per-product detail

Tap a product for full info — THC/CBD, terpenes, effects, talking points, format, batch — and its reviews.
- 3

Reviews live here

1-5 stars + up to 300 chars, one per budtender per product, with name, store, date, and an average. Budtenders edit/delete their own; everyone sees all. Admins delete guideline violations — never edit, never hide.
- 4

Drops & limited releases

New SKUs surface here first; limited releases sit in the Limited card with availability. Pair with a banner or feed post to announce.

DROP SHEET VS PK DECKS

The Drop Sheet is structured, live, per-SKU product data with reviews. PK Decks (next page) are the brand's uploaded PDF presentations, flipped through as-is. The "Full PK →" link jumps from one to the other.

LEAVE A REVIEW

★★★★★

Alex · The Green Room

Jun 4

Customers come back for this one. The garlic nose sells itself.

★★★★☆

Sarah · High Times

Jun 1

Strong seller for the indica crowd. PK talking points helped.

★★★☆☆

Jordan · The Joint

May 28

Great flower, but the price point is a hurdle for some regulars.

// JOURNEY 9

PK DECKS — FLIP-THROUGH PDFS

PK Decks are documents the brand uploads — the same polished sell decks they already produce. Budtenders flip through them like a PDF, page by page, inside the portal.

- 1

The deck library

Deck cards: cover thumbnail, title, product line, page count, date updated. Tapping one opens the full-screen flip-viewer.
- 2

The flip-viewer

Page-by-page navigation — swipe on mobile, arrows or click-zones on desktop, with a page counter ("3 / 12"). Pinch and double-tap zoom on any page. A thumbnail filmstrip to jump around. A download button if the brand allows it. Close returns to the library.
- 3

Why it's separate from the Drop Sheet

The Drop Sheet is structured, live, per-SKU data with reviews. PK Decks are the brand's uploaded presentation files, flipped as-is. Check the Drop Sheet for today's lineup; open a PK Deck to read the full produced deck.

NO REBUILD REQUIRED (ADMIN)

The brand uploads a PDF; the platform generates the cover thumbnail and page count automatically. Decks can be replaced (new PDF, same listing) or removed. The brand's existing deck is the deck — no field-by-field rebuilding.

TRACKED FOR ANALYTICS

Time spent flipping each deck and the last page reached feed the Brand Admin's analytics — showing not just opens but how far budtenders actually get.

PK DECK FLIP-VIEWER — FULL SCREEN

// JOURNEY 7

ASSETS: DOWNLOAD + REQUEST PHYSICAL

A categorised, searchable library — everything opens inside the platform, nothing links out. Each file card shows thumbnail, name, category, type, and size. Two actions on every asset.

- 1

Download (digital)

PDFs open in a full-screen viewer with zoom; images in a lightbox; video in the native player; ZIPs download directly. Every viewer has a download button. Downloads counted per file.
- 2

Request Physical (printed)

For tent cards, shelf talkers, displays, posters — a "Request Physical" button opens a short form: quantity, store name (pre-filled), shipping address (street, city, province, postal), contact + phone, optional note. Submitting sends it to the brand's fulfilment queue.
- 3

Track the request

The budtender sees a confirmation and tracks status — Requested, Approved, Shipped — in a "My Requests" list.

CLOSES A REAL GAP

This replaces the email-and-spreadsheet dance brands use today: the budtender asks for physical materials, with a shipping address attached, right inside the portal. The Brand Admin fulfils from a queue (page 12).

// JOURNEY "KNOW THE CRAFT"

FULL-SCREEN QUIZZES

Opening a quiz takes over the entire screen — the portal waits underneath. Progress autosaves; closing mid-quiz and returning resumes in place.

- 1

Five question types

Multiple choice, select-all, true/false, image-based (strain ID from a photo), matching (terpene to effect). Progress bar, back-stepping, review screen before submit.
- 2

Results that teach

Score, pass/fail against the threshold, per-question breakdown — wrong answers reveal the correct one plus the Brand Admin's explanation. Retakes only if enabled.
- 3

Certification + leaderboard

Passing a certification quiz unlocks a named badge on the profile, instantly. Brand leaderboards show rankings; the budtender's own rank always shows. All of it feeds the platform learning score and the Education Award race.

BUILT IN-PLATFORM (ADMIN)

A question builder with a preview that takes the quiz as a budtender would. Pass threshold, retakes, certification name, leaderboard, and time limit are all toggles. No external survey tools.

// "ENTER THE GROW" — THE SIGNATURE FEATURE

MEDIA FEED

A private, Instagram-style feed where the brand posts and budtenders respond. The MTL build labels it "Enter the Grow"; the section is brand-renameable.

- 1

The feed

A vertical scroll of brand posts: avatar and time, media (single image, video, or a 2-3 image strip), two caption lines, like and comment counts, first comment previewed.
- 2

Tap to expand — full screen

True full screen on mobile, full-height overlay on desktop. Full carousel with swipe + dots, live like count, full caption — and if linked, a "View Product Details →" button opening the Drop Sheet product or PK deck stacked on top. Closing returns to the exact feed position.
- 3

Live comments

Chronological — name, store, time, text. Max 500 characters, text only. New comments appear in real time for everyone on the post. Hearts on individual comments. Authors delete their own; admins delete any.
- 4

The brand in the thread

Team replies are visually distinct — brand avatar, Team label. A budtender asks when a batch drops; the brand answers in public; everyone learns. That visible dialogue is the point.

09

// JOURNEY 11 + BOOKING

AI ASSISTANT + BOOKED CALLS

A chat bubble fixed bottom-right, present on the landing screen and throughout. An always-on assistant trained on the brand's own content — the Drop Sheet, PK decks, product info.

1 Answers product + strain questions

"What's the strongest indica right now?", "Which strain has the highest myrcene?", "What do I tell a customer who wants something for sleep?" — answered from the current lineup and PK material.

2 Helps navigate the portal

"Where are the display templates?", "How do I leave a review?" — points the budtender to the right section.

3 Escalates to a booked call

Beyond its scope, or when the budtender wants a person, it hands off into the booking flow. It never starts an instant call — it surfaces the slots.

NO INSTANT CALLS — ANYWHERE

No "Start Call Now" button exists, for budtenders or the AI assistant. Every video interaction is booked. (The current MTL landing copy says "instant video call or book time" — the instant option is being removed. Build the booking flow only.)

4 1:1 booking + group sessions

A slot picker from the admin's published windows; booked slots vanish for others; Join goes live at start time in the in-platform room. Group sessions: Register → reminders → Join; recordings archived after.

AI ASSISTANT + BOOKING HAND-OFF

// JOURNEY 13 + GROUP CHAT

CONTACT + GROUP CHAT

Two distinct human channels — a direct line to the brand team, and a community room for all budtenders. (Both separate from the AI assistant, which is automated.)

1 Contact — reaches a human

The "Contact MTL / Get in Touch" card. No email client, no external form. Name, store, email pre-filled. Pick a topic (Restocking, Events, Assets, Feedback, General), write, send. It lands in the Brand Admin's inbox; the reply comes back as an in-platform notification.

2 Group Chat — the community

One persistent room per brand: every connected budtender plus the brand team, whose messages carry a Team marker. History persists; messages land in real time. On mobile the open chat is full screen.

3 Three channels, clearly separate

The **AI assistant** for instant answers from brand content. **Contact** for a private message to the team. **Group Chat** for community conversation. Each has its place; none replaces the others.

EVERYTHING IN-PLATFORM

No mailto links, no external chat tools. Contact messages and replies, and all community chat, live inside Sprout — so the brand keeps the relationship and the analytics.

// ADMIN JOURNEYS

BRAND ADMIN: NO DEVELOPER NEEDED

Every customisation and every piece of content runs through the dashboard. If an admin has to ask a developer to update their portal, the admin tools have failed.

- 1

Portal setup

Logo, name, tagline; primary/accent/background colours with a live preview; a curated font-pairing list; **hero slides uploaded and ordered** (the carousel is a first-class step); the launch set of banner cards; a section checklist (toggle + reorder). Flip Draft to Live.
- 2

Content

Assets (with per-asset "available as physical request" + limits). The Drop Sheet lineup per category. PK decks uploaded as PDFs (auto thumbnail + page count). Quizzes via the question builder. Banner cards with live/expiry dates. Media feed composer.
- 3

Physical-asset fulfilment

A queue of incoming requests — asset, quantity, store, shipping address, contact, note. Mark Approved → Shipped (optional tracking) or Decline with a reason. Status flows to the budtender's "My Requests." This replaces the email/spreadsheet process.
- 4

Reviews, calls, budtenders, AI

Delete guideline-violating reviews (never edit/hide). Set call availability + group sessions. Manage the roster, invites, and the access queue. Add custom Q&A to the AI assistant and review its question log.

// THE RETENTION FEATURE

ANALYTICS IN SECONDS

What keeps brands paying. An admin must answer "how engaged are my budtenders?" in seconds, with evidence. Everything exports to CSV.

- 1

Per budtender

Time on each PK deck (and pages reached), decks opened, quizzes with grades/attempts, Drop Sheet products viewed, reviews left, feed activity, sessions attended + join duration, assets downloaded, **physical requests made**, **AI questions asked**, chat activity, monthly rank, certifications.
- 2

Per deck / product / quiz

Decks: opens, average flip time, **last page reached**, downloads. Products: views, review count, average stars, distribution. Quizzes: completion rate, average grade, and the **most-missed question** — the single most actionable metric.
- 3

AI question log

The top questions budtenders ask the assistant — a goldmine showing what they don't know and what customers are asking on the floor.

THE FRAMING IS LAW

Education Award. Education fund. Professional development. On every surface, in every string — never prize, never reward, never cash.

PRODUCT RULES

RULE	FOR THE BUILD
One page, one shell	No routing. Sections are layers; closing one restores position. Build the shell first.
Hero is a rotating carousel	Auto-advances through brand images with arrows + dots. Not a static banner.
Banners: side / top strip	Flank the hero on desktop; collapse to a horizontal top strip on mobile.
Drop Sheet = product + review + rotation hub	Product info, reviews, and current/new/limited drops all live here.
PK Decks are uploaded PDFs	Brands upload deck files; budtenders flip through them. No field-by-field rebuild.
AI assistant is always on	Bottom-right, answers from brand content, navigates, escalates to booking.
Assets: download AND request physical	Every asset downloads; many can be requested as prints with a shipping address.

RULE	FOR THE BUILD
Booking only — no instant calls	No "Start Call Now" path, ever, incl. from the AI. The current "instant video call" copy is being removed.
Contact reaches a human	In-platform message to the team, distinct from the AI. No email clients.
Reviews: delete, never suppress	Admins remove violations; cannot edit or hide. Credibility is the feature.
Notifications per-brand, per-type	A granular settings layer, never one global switch.
Sprout stays invisible	Inside a portal, the only Sprout mark is the footer credit. The Hub is the one Sprout surface.
Admins never need a developer	Every customisation and piece of content is dashboard-manageable.
Education Award framing is law	Education fund, professional development. Never prize, reward, or cash.

// DELIVERY

BUILD PHASES

PHASE	THEME	SCOPE
PHASE 1	Foundation	Auth, template engine, portal customisation, landing screen with rotating hero + banner cards, the section grid, store assets (download), basic analytics.
PHASE 2	Product & Learning	The Drop Sheet (products + rotations), reviews, PK deck PDF flip-viewer, quizzes, certifications, leaderboard.
PHASE 3	Engagement	Media feed (posts, media, likes, real-time comments), group chat, banner-card management.
PHASE 4	Assistance & Connection	AI assistant, video booking + group sessions, in-platform contact + messaging, physical-asset requests and fulfilment.
PHASE 5	Community	The full Hub (leaderboard, Award of the Month, Last Month's Winner, Portals You Can Join), notification system.
PHASE 6	Intelligence	Full Brand Admin analytics (incl. AI question log, deck flip-depth, physical-request tracking), CSV export, Sprout Admin monitoring.
PHASE 7	Reach	Mobile app wrapper with push notifications, past-session recordings.

CORRECTED AGAINST THE LIVE MTL BUILD

This version fixes: the rotating hero, side/top brand banners, the AI assistant, flip-through PK deck PDFs, the Drop Sheet as the product/review/rotation hub, the contact section, and asset download + physical-request with a shipping address.
